

bulletin alert

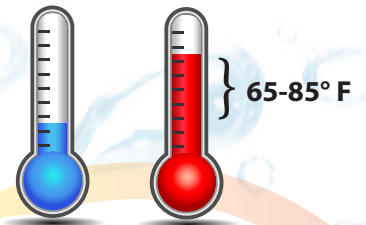

Early Season Burndown Cold Temps

Maximizing activity and the amount of active **TO**, **ON**, and **IN** weeds is key in colder conditions. Waiting for warmer days is not always an option. Make sure to use the best adjuvant delivery system **TO**, **ON**, and **IN** the plant.

Did you know.....

Ideal temp for most post herbicides is between 65-85° F.

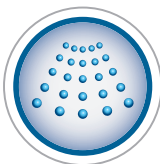

Temps below 60° F can start affecting performance of post-herbicide* resulting in:

- Slower Metabolism
- Decreased Plant Growth
- Decreased Uptake
- Decreased Translocation
- Less Control

*NDSU article

TO

Leci-Tech gets more spray to the plant through more performance sized droplets

ON

Leci-Tech keeps more spray on the plant with enhanced adhesion and spreading

IN

Leci-Tech gets more spray in the plant with increased penetration
