

# DOUBLE HEADER®

## Tech Sheet

**DOUBLE HEADER®** corn herbicide offers growers a dual Mode of Action pre-mix that quickly controls emerged weeds & provides a layer of residual to keep fields clean. **DOUBLE HEADER** can be applied pre or post emergence & can be used in Glyphosate, Glufosinate, or Conventional corn systems.

### Application Guidelines

- Fill the spray tank ½ - ⅓ full and begin agitation
- Add products one by one according to the guide below, allow each to completely mix in before adding the next
- If any additional “knockdown” products are added to the tank (i.e. Stinger®, Status®, Impact®) please jar test the mixture before tank mixing.
- Apply Double Header at a rate of 1.4 – 2.4 qt/Acre
- The addition of E-Z Mix at 1-2 qt/100 will improve the compatibility for any multi-product tank mix.
  - EZ mix should always be added last
