

Nitrain reduces volatility by inhibiting the activity of the urease enzyme. Urease is a naturally occurring enzyme in the soil responsible for breaking down urea when moisture and organic matter are present. Up to 40% of nitrogen can be lost to volatilization within hours of application.

**BENEFITS:**

- Prevents the volatilization of both Urea and UAN fertilizer applications.
- Increases the efficiency and utilization of nitrogen.
- May enhance yield in many different crops.

**RATES:** (REFER TO LABEL FOR MORE SPECIFIC USE RATES)

**Urea: 3.0 quarts/ton**

**UAN: 1.5 quarts/ton**

When conditions favoring volatility exist, or when longer control is needed, the rate may be increased by 1 qt./ton.

ALWAYS READ AND FOLLOW LABEL DIRECTIONS.
