

PROLOGUE™

PROLOGUE™ (5-0-0 6.3% Zn) is designed to increase the efficiency of existing and applied phosphate through Acetate and Nutrient Solubilizing Technology for a higher performing and more sustainable approach to phosphate nutrition.

FEATURES:

- Built with Acetate and Nutrient Solubilization Technology
- Provides two unique processes for nutrient uptake
- Designed to affect existing and soil applied phosphate

GROWER BENEFITS:

- Designed for early season applications or coming out of dormancy for permanent crops to support key P and Zn needs
- Optimized to promote chemical and biological availability of phosphate
- Highly available Zinc in Acetate form supports key early season functions

TECHNOLOGY:

Nutrient Solubilizing
Technology

Prologue is built with Nutrient Solubilizing Technology – a combination of metabolites and a specific bacteria proven to biologically extract Phosphorus from your soils to keep critical early season nutrients available for your developing crop

Prologue utilizes ACETATE Technology - a chemical mode of phosphorus extraction proven through University studies to Solubilize and Release Nutrients back into the soil for your crop to utilize.

Prologue contains highly available zinc that supports the utilization of phosphorus in the plant, aids in the production of early season growth hormones, and key proteins that help support your quality and yield goals.
