

Biocatalyst
Technology

TITAN[®]

XC

**Fertilizer biocatalyst
specifically formulated for use
with dry fertilizer blends**

Release More Nutrition. Expect More Results.

BENEFITS:

- **Increases nutrient availability and uptake**
- **Enhances nutrient use efficiency**
- **Promotes better root growth and development**

Get More from Every Dry Fertilizer Application

Titan XC is an innovative fertilizer biocatalyst that is specifically formulated for impregnation on dry fertilizer blends. It contains concentrated biochemistry that helps growers get more out of their applied P & K fertilizers by increasing nutrient availability and enhancing root growth and function.

Maximize Nutrient Availability and Uptake

By accelerating the breakdown of treated dry fertilizers and helping to convert organic nutrients into inorganic, plant-available forms, Titan XC makes nutrients more available for plant uptake and utilization, leading to increased plant and root growth and providing outstanding ROI. Growers who incorporate Titan XC into their programs often see improved yield responses and increased fertilizer efficiency, year after year.

Titan XC is effective across a broad range of plant and soil types and can be easily incorporated into any conventional production practice that employs dry fertilizers, without requiring product-specific equipment or a special trip across the field.

Unlock Applied Nutrients

Titan XC changes the way that dry fertilizer responds to soil. By “unlocking” applied nutrients, it makes them available more quickly, so that more of them get absorbed by plant roots.

Innovative Biocatalyst Technology from Loveland Products

Titan XC is distributed by Loveland Products through Crop Production Services (CPS). Please visit lovelandproducts.com or speak to your local CPS branch for more information or to purchase this technology.

Fertilizer Biocatalyst Technology

Biocatalyst
Technology

Titan XC is a biocatalyst that increases fertilizer availability, promotes nutrient mineralization to increase existing nutrient availability, and supports root growth through biochemical reactions with the plant.

How It Works

Untreated Dry Fertilizer

Dry Fertilizer Treated with TITAN XC

1
Untreated
fertilizer
applied
to soil

1 Dry fertilizer treated with Titan XC applied to soil

2
Titan XC
accelerates the
breakdown of
dry fertilizer

2
*Less breakdown
of dry fertilizer*

3
*Fewer nutrients
taken up into
plant*

3
*More
nutrients
available sooner*

4
*More nutrients
"captured"
by plant*

At a Glance

Application	<ul style="list-style-type: none">• Dry fertilizer impregnation
Target nutrients	<ul style="list-style-type: none">• Broad spectrum
Functioning components	<ul style="list-style-type: none">• Concentrated biochemistry
Primary mode of action	<ul style="list-style-type: none">• Increases mineralization and availability of nutrients in dry fertilizer blends
Features	<ul style="list-style-type: none">• Effective in a wide variety of soil types & across different crops• Compatible with P & K fertilizers, MESZ, MES, pell lime, sulfate of potash, ammonium sulfate & gypsum• Shelf stable

Uses and Rates

Dry Fertilizer	Recommended Rate
Phosphate (MAP 11-52-0, DAP 18-46-0, MES, MESZ) blends, potassium blends, sulfate of potash (SOP), ammonium sulfate (AMS), pell lime, gypsum and blends with urea	16-32 oz/ton
